Risks: All investments involve risks including possible loss of principal. Special risks are associated with foreign fixed income investments and currency fluctuations. Other risks include economic instability, geo-political developments, weather, health epidemics, business risk and military conflicts. Prices of ETFs in equities, fixed income, real estate, commodities and alternatives have economic, interest rate and financial risks. Risks associated with higher-yielding, lower rated debt securities include a higher default risk on the debt and possible loss of principal. ETFs in foreign countries, regions, industries and sectors all have principal risks. The fund invests in counter-market investments or commodities which may have derivatives with futures and options contracts which can be more volatile with higher loss of principal. Past performance is no guarantee to future performance.
