 ■ 22% Bonds
 ■ 10% Alternatives

Investment Philosophy

The Cantu Tactical Global ETF Strategy is a moderate risk “Blue Chip” portfolio with a philosophy which adopts a momentum investment selection approach for the Global Tactical Asset Allocation (GTAA) category. The firm’s belief assumes there are always investments moving up somewhere on the planet and the goal is to find these industry sectors and own them. This leads to an “Own the Best and Sell the Rest” philosophy of balancing these top sectors for principal preservation and principal appreciation using a disciplined process of analytical selections for the pursuit of consistent performance.

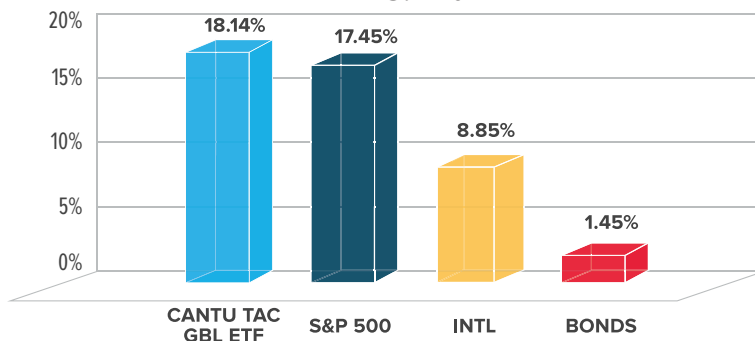

Strategy Objective

The strategy objective seeks global momentum sectors and balances these asset classes for a moderate risk “Large Cap” and “Mid Cap” portfolio regardless of Market Trends. The securities universe may include US and International equities, fixed income, real estate, technology, healthcare, energy, utilities, commodities, alternatives and others. The delivery system uses Exchange Traded Funds (ETFs) in all global asset categories. Three distinguishing factors:

- (1) Bonds are traded for principal gain and not just income.
- (2) A disciplined downside protection approach to mitigate losses and capture gains.
- (3) Counter-market securities provide potential gain in Down Markets instead of Cash.

PERFORMANCE

1 YEAR *as of January 31, 2017*
18.14%

| Trailing Performance | Cantu Tac Gbl | S&P 500 | International | Bonds | Cumulative |

PERFORMANCE DRIVEN DISCIPLINED ANALYTICAL SYSTEMATIC PROCESS

Super Asset Class weightings and the portfolio are determined by global economic analysis and at every turn in the market, evaluations are made for better sectors versus current holdings. Consistent performance is only possible by applying a disciplined analytical systematic course of action in the selection of sector classes. The portfolio managers' combined statistical and market experience over 30 years facilitates this methodical approach over various market scenarios. Performance with downside protection is our goal regardless of market direction.

Benchmark: Global tactical balanced allocation benchmark is Barclays US Aggregate Bond Trust USD 35%, DB Commodity 18%, MSCI EAFE PR USD 7%, S&P 500 PR 25%, S&P International Treasury TR 15%

Risks: All investments involve risks including possible loss of principal. Special risks are associated with foreign fixed income investments and currency fluctuations. Other risks include economic instability, geo-political developments, weather, health epidemics, business risk and military conflicts. Prices of ETFs in equities, fixed income, real estate, commodities and alternatives have economic, interest rate and financial risks. Risks associated with higher-yielding, lower rated debt securities include a higher default risk on the debt and possible loss of principal. ETFs in foreign countries, regions, industries and sectors all have principal risks. The fund invests in counter-market investments or commodities which may have derivatives with futures and options contracts which can be more volatile with higher loss of principal. Past performance is no guarantee to future performance.
