

CANTU TACTICAL INCOME STRATEGY | GTAA

STRATEGY OVERVIEW

Strategy Inception Date: Nov 2016
 Category: Tactical Allocation
 Strategy: Moderate Balanced Global

CURRENT ALLOCATIONS

GLOBAL TACTICAL ASSET ALLOCATION

Investment Philosophy

The Cantu Tactical Income Strategy is a moderate risk “Blue Chip” portfolio with a philosophy which adopts a momentum investment selection approach for the Global Tactical Asset Allocation (GTAA) category. The firm’s belief assumes there are always investments moving up somewhere on the planet and the goal is to find these industry sectors and own them. This leads to an “Own the Best and Sell the Rest” philosophy of balancing these top sectors for principal preservation and principal appreciation using a disciplined process of analytical selections for the pursuit of consistent performance.

Strategy Objective

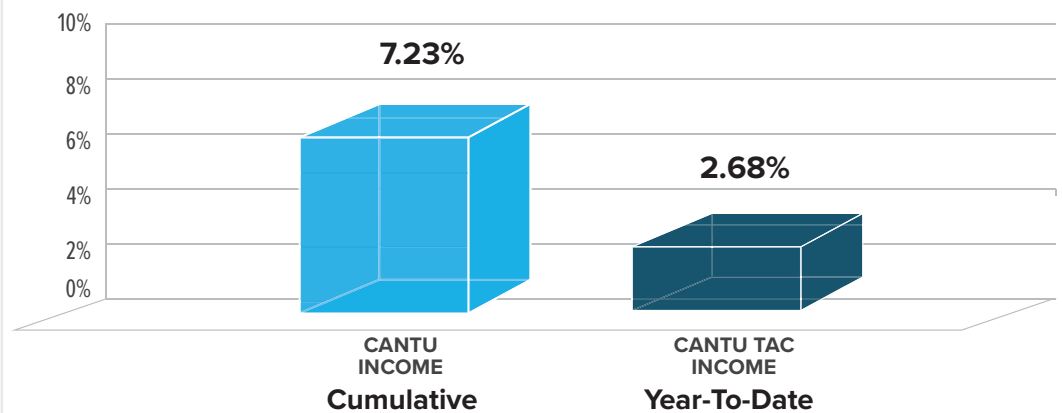

The strategy objective seeks higher income streams through global momentum sectors and balances these asset classes for a moderate risk "Large Cap" portfolio regardless of Market Trends. The securities universe targets US and International equities, fixed income, real estate, technology, healthcare, energy, utilities, commodities, alternatives and others. The delivery system uses Stocks and Exchange Traded Funds (ETFs).

- (1) Bonds are traded for principal gain and not just income.
- (2) A disciplined downside protection approach to mitigate losses and capture gains.
- (3) Counter-market securities provide potential gain in Down Markets instead of Cash.

PERFORMANCE DRIVEN DISCIPLINED ANALYTICAL SYSTEMATIC PROCESS

Super Asset Class weightings and the portfolio are determined by global economic analysis and at every turn in the market, evaluations are made for better sectors versus current holdings. Consistent performance is only possible by applying a disciplined analytical systematic course of action in the selection of sector classes. The portfolio managers' combined statistical and market experience over 30 years facilitates this methodical approach over various market scenarios. Performance with downside protection is our goal regardless of market direction.

Risks: All investments involve risks including possible loss of principal. Special risks are associated with foreign fixed income investments and currency fluctuations. Other risks include economic instability, geo-political developments, weather, health epidemics, business risk and military conflicts. Prices of ETFs in equities, fixed income, real estate, commodities and alternatives have economic, interest rate and financial risks. Risks associated with higher-yielding, lower rated debt securities include a higher default risk on the debt and possible loss of principal. ETFs in foreign countries, regions, industries and sectors all have principal risks. The fund invests in counter-market investments or commodities which may have derivatives with futures and options contracts which can be more volatile with higher loss of principal. Past performance is no guarantee to future performance.
